Description

I'm unable to connect to the production server using Remote Desktop. I receive an access denied message after authentication. This is preventing access to critical business applications and requires urgent review.

Comments

Comment by com.cylo7 [06/May/26]
User unable to establish Remote Desktop connection to production server. Verified issue persists after VPN connection and credential re-entry. Initial connectivity testing initiated.
Comment by com.cylo7 [06/May/26]
Confirmed server hostname resolves correctly via DNS. Test-NetConnection to TCP/3389 unsuccessful, indicating possible firewall restriction or RDP service issue on target server.
Comment by com.cylo7 [06/May/26]
Reviewed user group membership and verified appropriate Remote Desktop access permissions assigned. Issue appears infrastructure-related rather than account-specific.
Comment by Sid Hurley [06/May/26]
Reviewed server accessibility and identified Remote Desktop service interruption following recent maintenance cycle. Restarted RDP service and verified TCP/3389 accessibility restored.
Comment by Sid Hurley [06/May/26]
Confirmed successful Remote Desktop connectivity to production server after service restoration. User verified access to required systems and applications.
